**EXAMINER'S AMENDMENT*****Election/Restrictions***

This application contains claims directed to the following patentably distinct species: Species I (Figures 1-4, claims 1-3), Species II (Figures 6-9, claims 4-6), and Species III (Figures 10-17, claims 9-10). The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species and they represent different types of guide rails for valve lifters with different ways of anti-rotation prevention. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.**

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

1. During a telephone conversation with Randolph J. Huis on 24 May 2007 a provisional election was made with traverse to prosecute the invention of Species I, claims 1-3. Claims 4-10

Art Unit: 3748

are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Randolph J. Huis on 20 June 2007.

The application has been amended as follows:

Subsequent to the telephone call made to applicants' attorney, it was determined that elected claims 1-3 are allowable over the prior art. In a second telephone call to applicants' attorney, permission was given to the examiner to cancel the non-elected claims and pass the instant application to issue. Accordingly, claims 4-10 have been cancelled.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance: The claimed combination including the limitations of a guide rail having insertion key holes for roller tappets to be inserted longitudinally, accepting spaces to receive the tappets after insertion in an axial

Art Unit: 3748

direction via a groove in the tappet which engages a catch on the rail during axial displacement, and an anti-rotational guide area on the tappet that prevents the tappet from rotating once displaced into the accepting spaces, is not disclosed or rendered obvious over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### *Conclusion*

5. The IDS (PTO-1449) filed on 20 June 2005 has been considered. An initialized copy is attached hereto.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of 3 patents.

- Albertson et al. (U.S. Patent 6,978,752) disclose a hybrid metal/composite valve lifter guide with an insertion guide opening and lateral positioning for anti-rotation means.

- Haas et al. (U.S. Patent 6,994,064) disclose a guide rail for valve lifters with insertion guides and flat portions for anti-rotation means.

- Barth et al. (U.S. Patent Application Publication 2006/0278184) disclose a guide gib for the valve lifters with guide insertions, lateral positioning, and plastic supports.
